

We are looking for DevOps Engineer!

Since 2016, Propair Flight has been developing virtual aircraft and airports, software solutions, and cloud-based data analytics systems for flight simulators. As a member of the AXIS Aviation Group, our goal is to improve flight safety and make pilot training more efficient by developing top-tier Full Flight and VR simulators.

We are seeking a skilled and proactive **DevOps Engineer** to join our team and help drive the efficiency, security, and scalability of our development and deployment processes. You will play a key role in automating workflows, maintaining infrastructure, and ensuring high availability and performance of our services.

Responsibilities

- Design, implement, and manage CI/CD pipelines using GitLab CI and Jenkins.
- Administer and optimize cloud infrastructure on AWS and DigitalOcean.
- Set up and maintain observability tools (e.g., Prometheus, Grafana) to ensure system health and performance.
- Collaborate with development teams to containerize applications using Docker and support microservices architecture.
- Develop and maintain infrastructure as code using Terraform.
- Apply best practices in network, system, and cloud security.
- Monitor and troubleshoot infrastructure and deployment issues, ensuring minimal downtime.
- Skilled in backup integrity verification and disaster recovery planning for databases
- Automate routine operations and improve system reliability and scalability.

Required Skills and Qualifications

- Strong experience with **GitLab**, Git-based workflows, and CI/CD pipelines (GitLab CI, Jenkins).
- Proficient in working with AWS and DigitalOcean environments.
- Solid knowledge of **observability/monitoring tools** such as **Prometheus**, **Grafana**, or similar.
- Working knowledge of **networking concepts** and **security best practices**.
- Hands-on experience with Terraform for infrastructure as code.
- Proficiency in using **Docker** and supporting **microservice-based architectures**.
- Strong problem-solving skills and the ability to work in a fast-paced environment.

Nice to Have

- Experience with **Kubernetes** for orchestration.
- Knowledge of **Vault** for secrets management.

- Familiarity with **Artifactory** for artifact storage and management.
- Experience with **Ansible** for configuration management.
- Basic understanding of **Selenium** for automated testing.

What is it like working with us?

- Our motivated team consists of pilots and aviation enthusiasts, software developers, 3D artists, Cloud IoT and machine learning experts, and mobile/web developers
- You will continuously grow, and we support flexible and remote work
- You'll work in a modern office surrounded by the latest software and aircraft simulator technologies – and sometimes, we even go flying
- Work schedule: 40 hours/week full-time.
